

Zoom tips for Digital Mentors

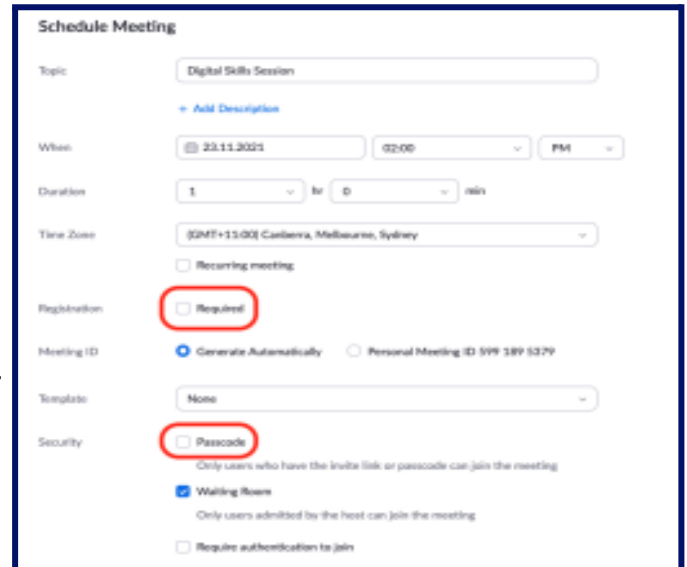

Zoom is a useful video conferencing tool that enables you to hold your digital skills sessions remotely. This means that learners who might not be able to attend in person can still benefit from your support in learning how to use technology and the internet.

As with face-to-face sessions, there is a lot of preparation and group management needed when holding a digital skills session over Zoom. Below are some tips to help you and your learners have a positive experience.

Make your meeting easy to join

When you're setting up your Zoom sessions, it is good practice to make it as easy as possible for your learners to get into the session.

Tip: You can secure your session once all of your learners have joined by locking the session. You can manage who is let into your session by using the waiting room feature.

The screenshot shows the 'Schedule Meeting' interface in Zoom. The 'Topic' field is set to 'Digital Skills Session'. The 'When' section shows the date '23.11.2021', time '02:00', and 'PM'. The 'Duration' is set to '1' hour. The 'Time Zone' is '(GMT+11:00) Canberra, Melbourne, Sydney'. The 'Recurring meeting' checkbox is unchecked. In the 'Registration' section, the 'Required' checkbox is highlighted with a red circle. The 'Meeting ID' section has 'Generate Automatically' selected. The 'Template' is set to 'None'. In the 'Security' section, the 'Passcode' checkbox is highlighted with a red circle. Below it, the 'Waiting Room' checkbox is checked, and the 'Require authentication to join' checkbox is unchecked.

Make sure your learners have the details of your session and how to access it

We've developed three new, step-by-step guides to help your learners access your sessions. Each printable guide includes steps on how to download Zoom onto the relevant device, along with how to access your session on their device when it is time.

There is also space for you to add the date, time, Zoom meeting ID and your contact details to the document, should you wish to.

Use meeting controls to avoid unwanted distractions

As the host of a Zoom meeting, there are several controls you can use to minimise disruptions for you and your learners.

If your learners are new to Zoom, they may be unfamiliar with how to manage their microphones and camera. Luckily, Zoom allows you to manage these for your learners when all you need them to do is to follow the session.

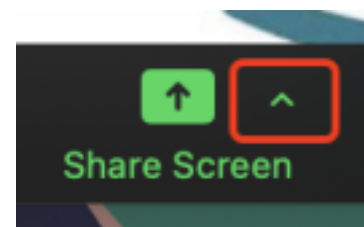

This is all managed from within your Zoom Meeting.

- To control whether your learners can unmute themselves or show their video, first click on the “More” button in the participants panel (number 1 on the screenshot right).
- You will then see options for controlling what your learners can do (number 2 on the screenshot right).
- There is also the option here to automatically mute learners on entry (number 3 on the screenshot right).

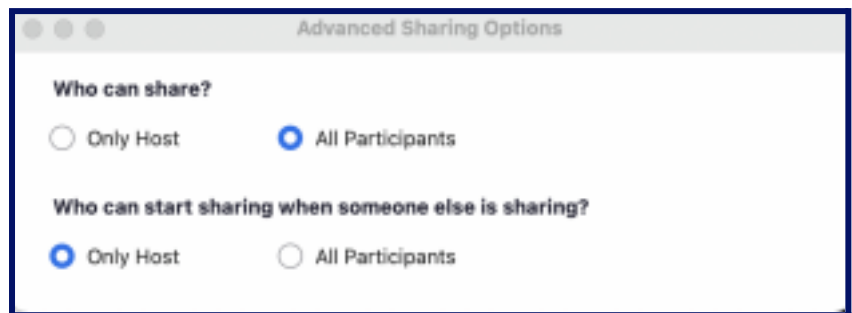

Tip: Combining the options of ticking “Mute All Upon Entry” and unticking “Unmute Themselves” will stop any accidental disruptions during your session.

You can also stop learners from accidentally sharing their screen during sessions. Click on the little arrow in the “Share Screen” box will allow you to change who can share their screen and whether they are allowed to interrupt the host.

Zoom “meetings” are more interactive than “webinars”

In Zoom (depending on the package you pay for) you may have the ability to host either a “meeting” or a “webinar”.

Webinars are great for sharing information with a lot of people all at once, but they aren’t very interactive for your learners. Your learners will be able to see you and you can share your screen, but they will not be able to use their microphones on to ask questions, use their cameras to say hello or share their screen if they need help.

For a small digital skills session (we recommend no more than 6-8 people per Digital Mentor), a Zoom “meeting” would be a better option.

Other helpful resources

The [Good Things website](#) has some resources available to support you as a Digital Mentor:
