

Getting connected at home

Thinking about changing your home internet plan? Or, looking to save money? These tips can help you choose the right connection for your home.

Think about how you use the internet

Everything you do online uses different amounts of data. Sending an email uses a smaller amount of data and may need lower internet speeds compared to watching a movie online.

Tip: Before looking at different home internet plans, think about how you and your household want to use the internet.

What you can do on different plans

When you visit an internet provider's website you may see numbers for download and upload speeds. These are the kinds of home internet plans you can sign up to.

Lower internet plans: like 25 Mbps download / 4 Mbps upload are good for using social media and online shopping.

Higher internet plans: like 500 Mbps download / 40 Mbps upload are better for watching movies online and video calls.

If many people in your home will be using the internet at the same time, a higher speed plan may help the internet to work more smoothly.

Tip: Where you live can change how you connect to the internet. Find out how your home connects:

Cost saving tips

Some internet providers offer discounts for seniors, pensioners and concession card holders.

Tip: Websites like WhistleOut, Choice and Finder can help you compare home internet plans.
